

Git Setup Guide for Interns

REVEST Project - Push your code to the repository

Before You Start

The repository has already been created for you. This is the URL you will use in Step 3:

```
https://github.com/ahmed-hmaidat/revest-intern-project.git
```

Each intern works on their OWN branch. Your branch name is: `revest-intern-<your-name>`. For example, if your name is Ali, your branch is `revest-intern-ali`. Everywhere this guide says `revest-intern-<your-name>`, replace it with your actual branch name. Make sure you have a GitHub account before starting.

Step 1 - Install Git

1. Download Git from: <https://git-scm.com/download/win>
2. Run the installer and keep all default options (just click Next until Finish).
3. Restart VS Code after the installation.
4. Verify the installation - open the VS Code terminal (Ctrl + `) and run:

```
git --version
```

If you see a version number (e.g. `git version 2.45.0`), Git is installed correctly.

Step 2 - Configure Your Identity (one time only)

Tell Git who you are. Run these two commands in the terminal:

```
git config --global user.name "Your Name"
git config --global user.email "your-email@company.com"
```

Use your real name and your company email address.

Step 3 - Connect Your Code to the Repository

Open the VS Code terminal inside your project folder (the folder that contains your code), then run:

```
git init
git remote add origin https://github.com/ahmed-hmaidat/revest-intern-project.git
```

Step 4 - Create YOUR Branch and Push

Create your own branch using your name. Example for an intern named Ali:

```
git checkout -b revest-intern-ali
git add .
git commit -m "Initial commit"
git push -u origin revest-intern-ali
```

Use YOUR name in the branch, not "ali". The first push will open a browser window asking you to sign in to GitHub. Log in with your account - Git will remember it afterwards.

Step 5 - Daily Workflow

Every time you finish a piece of work, save it to the repository with these three commands:

```
git add .
git commit -m "describe what you changed"
git push
```

Write a short, clear message describing what you changed, for example: "fix login validation" or "add customer report page".

Important Rules

- Always work on YOUR OWN branch (revest-intern-<your-name>). Never push to main or to another intern's branch.
- Check which branch you are on with: git branch (the current branch has a * next to it).
- Commit and push at least once a day so your work is backed up.
- If you see an error you do not understand, copy the full message and send it to your supervisor.

Quick Reference

What you want to do	Command
Check Git is installed	git --version
See current branch and changes	git status
Switch to your branch	git checkout revest-intern-<your-name>
Save changes locally	git add . then git commit -m "message"
Upload changes to the repo	git push
Download latest changes	git pull
